

## CONNECTING FUTURES: BRINGING EDUCATION TO THE REAL QUEZON

In a remote village in the Real Quezon, over 80 school children now have access to the digital world through Nezda Serves initiative. With Starlink internet in their school, students around the age of 12 can explore learning beyond textbooks.

Through guided video lessons, they are now studying subjects like human anatomy, science, and other core topics with the support of their teachers. This access is transforming how they learn, making education more engaging, visual, and meaningful.

At Nezda, we believe the future of the Philippines begins with its children. Sometimes, all it takes is one internet connection to open a world of possibility.
